

Edinburgh Windows & Doors Ltd

Sash and Case  
Heritage “Slim line” double glazing

Heritage double glazed units are designed for properties in conservation areas, as well as listed buildings. Slimtech Heritage double glazed units are designed to be installed with our timber framed windows.

Heritage units can also be put into existing windows if the condition of the windows is good. This means we can preserve the historic timber in old windows that are likely to be installed in most listed buildings in Edinburgh and surrounding areas.

Our heritage double glazed units are designed with a 4mm, 6mm or 8mm cavity in the unit. For the majority of jobs in Edinburgh we recommend a 6mm spacer with 4mm glass. This results in a total unit size of 14mm. Another popular option is units with a total depth of 12mm.

Edinburgh Windows and Doors offer a number of services that can help with heat retention in listed buildings. We offer a comprehensive draught proofing service. All of our full refurbishments come with draught proofing included. We also offer a double glazing service as above if the windows are able to support the new glass. We will evaluate your windows and check the timber is in a good enough condition to support the new glass. We try to retain as much of the original window as possible but if this is not possible due to rot and decay we can also provide new timber windows designed to match the look of your existing windows. We use traditional techniques and products at Edinburgh Windows and Doors such as linseed putty and linseed oil mastic.
